

Azure Security Audit

In the on-premises world, application security threats were limited to the organization's network. Both the impact and likelihood of potential risks are significantly higher when dealing with cloud computing. Thus, security is now the responsibility of everyone who are part of the application development team, not just security specialists. With this shift in responsibilities, the multitude of security risks and available security controls for Azure infrastructure and applications can be overwhelming.

Based on Microsoft Cloud Adoption Framework and real-life experiences from securing enterprise applications running on Azure, Zure will assess your Azure environment and let you focus on the most impactful threats.

THE CONTENT

In the project, our consultants will utilize Microsoft Cloud Adoption Framework to:

- Assess your current Azure environment for security risks and best practices for
 - Identity Baseline
 - Security Baseline
- Document the findings of the security assessment
- Propose controls and procedures for securing the your Azure environment

PURPOSE

The purpose of the project is to assess the security risks of your Azure environment or application.
